Altrixs — Junior Developer Complete Guide (Hinglish)

Kis ke liye: Fresher / Junior developer · Project: Altrixs staff portal · Live site: **https://altrixs.com/** (deploy senior/DevOps handle karenge) · Tumhara kaam: **local pe feature complete + test**, phir PR / code push.

Simple samjho:
Abhi project mein bahut screens sirf *dikhti* hain (fake/DEMO data). Database se connected nahi. Tumhara goal: **ek-ek screen** ko asli working banao — UI theek + API + database + workflow. Har din **sirf 1 prompt** Cursor/AI ko do, kaam karwao, neeche wale **Test steps** khud chalao. Jab local pe sab theek ho, tab senior ko bolo live `altrixs.com` pe deploy karne ke liye.

1) Pehle ye cheezein setup kar lo

1. Laptop pe project folder kholo: `divinecare-platform` (Altrixs Next.js app).
2. Terminal: `npm install` → `npm run dev` → browser: `http://localhost:3000`
3. Database connected hona chahiye (`.env` mein `DATABASE_URL`). Agar error aaye to senior se poocho.
4. Login try karo (password sabka: `Altrixs@123`):
    - `admin@altrixs.local`
    - `clinician@altrixs.local`
    - `frontdesk@altrixs.local`
    - `billing@altrixs.local`
    - `hr@altrixs.local`
    - `director@altrixs.local`
5. Har din ke baad ye command chalao: `npx tsc --noEmit` — error nahi aana chahiye.

2) Abhi kya LIVE hai / kya sirf UI hai

Screen	Status	Matlab
Login, Dashboard, Clients list, Appointments, HR staff invite, Settings, Platform admin	LIVE	Database se connected — pehle mat todo
Client detail	Half done	Kuch kaam karta hai, Notes waghera incomplete
Waitlist, Intake, Messages, Alerts, To-Do, Telehealth, EHR notes/plans, Billing, Credentials…	UI ONLY	Fake data — ye complete karna hai

Fresher tip: "UI ONLY" ka matlab page sundar dikhta hai, lekin refresh / dusra laptop pe data gayab / fake rehta hai. "LIVE" ka matlab create karo → refresh → data wahi hai (database mein save).

3) Har din ka flow (yaad rakhna)

1. **Prompt copy** karo (neeche Day box se) → Cursor chat mein paste.
2. AI/code complete hone do.
3. **Test checklist** khud chalao (tick karo).
4. Agar fail → AI ko bolo: "Ye test fail hua: …" aur fix karwao.
5. Pass ho → short note likho (kya banaya) → next day.
6. Deploy **tum mat karna** jab tak senior na bole. Local pass = ready for live.

4) Daily prompts + testing (1 by 1)

DAY 1 — Client Detail page complete karo

Screen: Clients → kisi client pe click (`/dashboard/clients/[id]`)

Kyun zaroori: Baaki workflow isi patient record pe depend karta hai.

Cursor ko ye prompt do:

```
Day 1 — Client Detail ko fully working banao.

Route: /dashboard/clients/[id]

Problem: Client load/avatar already API se aata hai, lekin Notes tab local/fake hai. Check-ins aur appointments tab
incomplete ho sakte hain.

Kaam:
1) Clinic UI polish (clean cards).
2) Notes database mein save ho (Prisma model + API). Refresh ke baad note rahe.
3) Appointments tab isi client ki real appointments dikhaye.
4) Check-ins: mood/stress add ho aur list/chart update ho.
5) Insurance fields edit + save (existing client PATCH API use karo).
6) roleAccess respect karo.

Done tab jab: note create → hard refresh → note wahi; insurance save → reload same; tsc clean.
```

Tum kya test karoge (local):

1. `clinician@altrixs.local` se login.
2. Clients → ek client kholo.
3. Notes tab: naya note likho → Save → page refresh (Cmd+R) → note dikhna chahiye.
4. Check-Ins: mood 3, stress 8 add karo → list mein aaye.
5. Insurance: payer badlo → Save → refresh → wahi payer.
6. Appointments tab: agar us client ki appointment hai to dikhe (pehle Appointments se bana ke check kar sakte ho).
7. Terminal: `npx tsc --noEmit` OK.

DAY 2 — Waitlist Manager LIVE banao

Screen: `/dashboard/clients/waitlist` · **Role:** Front Desk

```
Day 2 — Waitlist Manager ko DEMO hata ke real backend pe lao.

Route: /dashboard/clients/waitlist

Kaam:
1) Prisma WaitlistEntry model (name, phone, specialty, urgency, status, insurance, notes, clinicianId, org).
2) APIs: list/create/update/match/close.
3) Match clinician → staff list se assign.
4) Convert to intake/client → Clients list mein naya client bane.
5) Page se DEMO array hatao; UI (table + detail) rakho.
6) Front Desk access; Billing ko waitlist na dikhe.

Done: add → refresh → entry rahe; match + convert client banaye.
```

Test:

1. `frontdesk@...` login → Waitlist.
2. "Add to Waitlist" → form bharo → list mein aaye.
3. Hard refresh → entry gayab NA ho.
4. Match to Clinician → status Matched.
5. Convert / intake → Clients page pe naya patient dikhe.
6. `billing@...` login → Waitlist nav mein nahi hona chahiye.

DAY 3 — Digital Intake LIVE

Screen: `/dashboard/clients/intake`

```
Day 3 — Digital Intake packets real banao.

Route: /dashboard/clients/intake

Kaam:
1) IntakeInvite model (email/token/status pending|completed|expired + form data).
2) Create/list/complete APIs.
3) Complete hone pe Client create/update (demographics + insurance).
4) Waitlist se "Convert to Intake" isse jude.
5) DEMO hatao.

Done: intake complete → Clients mein data dikhe.
```

Test:

1. Front Desk → Digital Intake → naya invite/packet banao.
2. Complete mark karo (demo form fill) → Clients pe patient dikhe/update ho.
3. Refresh ke baad status sahi (completed).
4. Waitlist convert se bhi pending intake bane.

DAY 4 — Consent Forms LIVE

Screen: `/dashboard/ehr/consents`

```
Day 4 — Consent forms backend.

Route: /dashboard/ehr/consents

Kaam:
1) Consent model (clientId, type, status pending/signed/expired).
2) Create + sign APIs.
3) Client detail pe consent summary dikhao.
4) DEMO_CONSENTS hatao; UI polish.
5) roleAccess: Front Desk + Clinician allowed.

Done: sign → refresh → signed rahe.
```

Test:

1. Consent create (pending).
2. Sign/mark signed → refresh → Signed.
3. Us client ki detail pe status dikhe.
4. HR login se consents open na ho / redirect.

DAY 5 — Messages LIVE (model pehle se hai)

Screen: `/dashboard/messages`

```
Day 5 — Messages page ko Prisma Message model se wire karo.

Context: Message model already hai. features/messages stub empty return karta hai. Page DEMO use karti hai.

Kaam:
1) /api/messages (+ threads) implement.
2) messagesApi stubs hatao / real fetch.
3) Page se DEMO_THREADS hatao.
4) Staff message send kare → DB save.

Done: send → refresh → message wahi.
```

Test:

1. Clinician → Messages → client choose / thread.
2. “Test hello” bhejo.
3. Refresh → message dikhe.
4. Browser Network tab mein `/api/messages` 200 dikhe (fake local state mat).

DAY 6 — Risk Alerts LIVE

Screen: `/dashboard/alerts`

```
Day 6 — Risk Alerts ko RiskAlert model se connect karo.

Kaam:
1) /api/risk-alerts GET + review PATCH.
2) alertsApi stub implement.
3) Page se DEMO_ALERTS hatao.
4) Workflow: Check-in pe mood <=3 ya stress >=8 → auto alert create.
5) Review → reviewed=true.

Done: low mood check-in → Alerts pe dikhe; review ke baad unreviewed se hate.
```

Test:

1. Client detail pe check-in mood=2 add karo.
2. Risk Alerts page pe naya alert dikhe.
3. Review dabao → unreviewed count kam.
4. Refresh → reviewed state save.
5. Front Desk ko Alerts nav na dikhe.

DAY 7 — Progress Notes (EHR) LIVE

Screen: `/dashboard/ehr/notes`

```
Day 7 — Clinical Progress Notes real banao (sabse important clinician screen).

Kaam:
1) ClinicalNote model (clientId, authorId, draft/signed, content, appointmentId optional).
2) Create/update/sign APIs. Signed note edit na ho.
3) DEMO_NOTES hatao.
4) Day 1 client notes ko isi system se jodo (duplicate mat rakho).
5) Appointment complete ke baad note likhne ka link helpful ho.

Done: draft → sign → refresh → signed; edit block.
```

Test:

1. Clinician → Progress Notes → draft banao.
2. Sign karo → status Signed.
3. Refresh → content same; edit allow na ho.
4. Client detail pe bhi same note dikhe.
5. Billing user notes page na khol paye.

DAY 8 — Treatment Plans LIVE

Screen: `/dashboard/ehr/treatment-plans`

```
Day 8 — Treatment Plans backend.

Kaam:
1) TreatmentPlan model (clientId, goals, start/end, status).
2) CRUD + renew.
3) 14 din mein expire hone wale “expiring” flag.
4) DEMO hatao.

Done: create + renew persist.
```

Test:

1. Plan banao end date 7 din baad.
2. Expiring / warning dikhe.
3. Renew → new end date save.
4. Refresh ke baad data rahe.

DAY 9 — My To-Do real queue

Screen: `/dashboard/tasks`

```
Day 9 — My To-Do ko fake TASKS se hata ke real work queue banao.

Kaam:
1) /api/tasks jo unsigned notes, expiring plans, incomplete intake, (baad mein PA) se list banaye.
2) Dismiss feature (24h hide) optional but recommended.
3) Action buttons real pages pe le jaayein.
4) Existing polished UI rakho; hardcoded TASKS hatao.

Done: unsigned note → To-Do mein aaye; sign → task gayab.
```

Test:

1. Ek unsigned draft note chhodo.
2. My To-Do pe “Unsigned…” task dikhe.
3. Note sign karo → To-Do refresh → task clear.
4. Filters (Notes / Urgent) sahi kaam karein.

DAY 10 — Telehealth + Appointments jodo

Screen: `/dashboard/telehealth`

```
Day 10 — Telehealth ko real virtual appointments se lao.

Kaam:
1) Appointment.isVirtual=true wali aaj ki list API se.
2) Start/Complete session → appointment status update.
3) Complete ke baad "Write note" link.
4) Fake TODAY_SESSIONS hatao. Zoom real integration mat banao — stub URL OK.

Done: virtual appt → Telehealth pe dikhe; complete → Appointments pe COMPLETED.
```

Test:

1. Front Desk: aaj ke liye virtual appointment banao (clinician assign).
2. Clinician → Telehealth → session dikhe.
3. Start/Complete → Appointments status change.
4. Write note link notes page khole.

DAY 11 — Eligibility LIVE

Screen: `/dashboard/ehr/eligibility` · Role: Billing / Front Desk

```
Day 11 — Eligibility checks save karo (payer stub OK, real Availity mat).

Kaam:
1) EligibilityCheck model + APIs.
2) Check button stub result save kare.
3) DEMO hatao; client insurance se payer padho.

Done: check → history refresh ke baad rahe.
```

Test:

1. `billing@...` → Eligibility → client select → Run check.
2. Result list mein aaye.
3. Refresh → history same.

DAY 12 — Prior Authorizations LIVE

Screen: `/dashboard/ehr/prior-auths`

```
Day 12 — Prior Auths CRUD + units + expiry.

Kaam:
1) PriorAuth model (units, expiresAt, status).
2) APIs + UI DEMO hatao.
3) Expiring / low units → My To-Do mein dikhe (Day 9 se connect).

Done: PA create → To-Do alert jab expiry near.
```

Test:

1. PA banao jo 4 din mein expire ho.
2. Prior Auths list mein dikhe.
3. My To-Do pe related task aaye.
4. Refresh persist.

DAY 13 — Billing (Claims) spine LIVE

Screen: `/dashboard/billing` (pehle sirf main claims page)

```
Day 13 — Billing home ko real Claim model se jodo.

Kaam:
1) Claim model (client, cpt, amount, status draft/submitted/pending/approved/denied).
2) Completed appointment + signed note se draft claim banao.
3) Submit stub status badle.
4) Sirf /dashboard/billing pe DEMO hatao (denials/payments baad mein).

Done: visit complete → draft claim → submit persist.
```

Test:

1. Appointment complete + note signed (pehle ke days).
2. Billing login → draft claim dikhe / generate.
3. Submit → status pending/submitted refresh ke baad.
4. Clinician billing page na dekh paye.

DAY 14 — HR Credentialing LIVE

Screen: `/dashboard/hr/credentialing`

```
Day 14 — Staff credentials real.

Kaam:
1) Credential model linked to User.
2) CRUD for HR; expiring/expired filters.
3) DEMO hatao.

Done: add credential → refresh rahe.
```

Test:

1. `hr@...` → Credentialing → clinician ke liye license/malpractice add.
2. Expiry jaldi rakho → expiring list mein aaye.
3. Refresh persist.
4. Front Desk access na mile.

DAY 15 — Supervision Log LIVE

Screen: `/dashboard/hr/supervision`

```
Day 15 — Supervision logs real staff se.

Kaam:
1) SupervisionLog model (supervisee, supervisor, date, notes, signatures).
2) HR/Director create; Clinician own logs dekh sake.
3) DEMO hatao.

Done: create → clinician ko dikhe; sign save.
```

Test:

1. Director/HR log banaye clinician ke liye.
2. Clinician login → Supervision mein dikhe.
3. Sign/ack → refresh OK.

5) Day 15 ke baad (baaki screens) — same pattern

Ab core clinic workflow chalna chahiye. Baaki pages bhi UI ONLY hain — **roz 1 screen** isi template se:

```
Day X — `/dashboard/<screen>` ko LIVE banao.

1) DEMO/fake data hatao
2) Prisma model + /api CRUD
3) Related workflow se jodo (Client / Appointment / Note / Claim)
4) roleAccess follow karo
5) Clinic UI polish
6) tsc clean

Done: create → hard refresh → data rahe; galat role block.
```

Suggested order (ek din = ek):

1. Billing Payments
2. Denial Management
3. Autopay

4. Superbills
5. Payer Panels
6. Diagnoses
7. Assessments
8. E-Prescribing
9. Group Sessions
10. Supervisor Review
11. EHR Overview (real counts)
12. AI Coding (local stub OK)
13. MBC + Outcomes
14. Scribe / AI Insights (local stub)
15. Analytics (schedule/productivity/surveys)
16. Reports
17. Resources
18. Community + Referrals
19. PR / PRP / Enterprise / Subscription polish
20. Public booking page → Waitlist/Appointment create
21. Admin ke baaki mock tabs (audit log)
22. Final: proxy mein server-side role path block

Har ek ke liye test same: **create → refresh → role check → tsc**.

6) Poora clinic flow — final exam (local)

Jab Day 1–15 ho jaaye, ye full story ek baar chalao (jaise asli clinic):

1. **Front Desk:** Waitlist add → Match → Intake complete → Client banega.
2. **Front Desk:** Consent sign + Appointment book (virtual bhi).
3. **Clinician:** Telehealth/start → Complete → Progress note draft → Sign.
4. **Clinician:** Low mood check-in → Alert aaye → Review.
5. **To-Do:** Unsigned note task clear ho sign ke baad.
6. **Billing:** Claim draft → Submit.
7. **HR:** Credential + Supervision log.
8. **Admin:** Staff invite / locations pehle se chalna chahiye.

Agar ye 8 steps pass → project "working clinic MVP" maan sakte ho. Phir senior se kaho **https://altrixs.com/** pe deploy kare.

7) Deploy ke baare mein (tumhara nahi, senior ka)

- Tum: local test pass + PR / branch push.
- Senior/DevOps: production deploy to **https://altrixs.com/**.
- Deploy ke baad bhi wahi Test checklist live pe smoke test karo (login + 1 create/refresh).
- Live pe kabhi bhi seed passwords production users ke liye mat use karna — sirf local.

8) Agar stuck ho jao

- Error screenshot + "Day number + kaunsa test fail" AI ko do.
- Pehle confirm karo: sahi role se login ho? `npm run dev` chal raha? DB up?
- Ek din mein 2 screens mat mix karo — fresher galti yahi hoti hai.
- DEMO array page pe reh gaya kya? Search karo `DEMO` us file mein — hona nahi chahiye after that day.
